Nagpur, Maharashtra | +91-9881246251 | akhileshchitare04@gmail.com | [linkedin.com/in/akhilesh00](https://www.linkedin.com/in/akhilesh00) | github.com/Akhilesh9911

PROFESSIONAL SUMMARY

Java backend developer who built and secured a production CRM system end-to-end — REST APIs, JWT authentication, and MySQL schema design — as backend owner on a Spring Boot project, alongside a live internship doing the same. CGPA 8.26, final-year B.Tech CSE. Core stack: Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, MySQL, Spring Security. Co-author, IEEE-accepted publication (YOLOv8 deep learning). Targeting entry-level Java/Spring Boot Backend Developer roles.

TECHNICAL SKILLS

Languages: Java (Core & OOP), SQL, JavaScript, HTML5, CSS3

Core Java & Software Engineering: Object-Oriented Programming (OOP), Collections Framework, Exception Handling, Multithreading, JDBC, JVM Fundamentals, Data Structures & Algorithms (DSA), Design Patterns, Clean Code Principles, SDLC, Debugging, Troubleshooting, Problem Solving

Frameworks & Backend Development: Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Hibernate (ORM), Spring Security, JWT, RESTful APIs, REST Web Services, Microservices Architecture, API Integration, MVC Architecture

Databases: MySQL, MongoDB (Basic), Relational Database Management System (RDBMS), SQL Querying, Database Design, Database Management

DevOps & Tools: Git, GitHub, Maven, Docker, Docker Compose, Linux, AWS Fundamentals (EC2, S3)

Development Tools: IntelliJ IDEA, VS Code, Postman, Swagger/OpenAPI, GitHub Copilot

EXPERIENCE

Java Developer Intern — AB Infotech Solutions Pvt. Ltd.

Dec 2025 – Jun 2026

- Enabled secure, role-aware access to the CRM platform, as measured by JWT-based authentication protecting all customer, contact, and deal endpoints, by implementing Spring Security and JWT token validation across the Spring Boot backend.
- Delivered core CRM functionality across four data modules (customer, contact, deal, task), as measured by full CRUD coverage on each, by designing REST APIs in Spring Boot and persisting data through Hibernate/JPA repositories.
- Improved data reliability for the CRM's reporting and filtering features, as measured by accurate retrieval across customer and sales-pipeline records, by writing optimized JPA queries and SQL joins against the MySQL schema.
- Maintained code quality and team velocity during the build, as measured by consistent feature delivery across debugging and enhancement cycles, by using Git/GitHub for version control and SOLID-aligned class design on the backend services owned.

PROJECTS

HireForge AI — AI-Powered Resume Analyzer

Java 17, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, MySQL, Apache PDFBox, Apache POI, Google Gemini API, Docker, Docker Compose, Maven

- Designed a modular Spring Boot backend with distinct Auth, User, and Resume Analyzer modules, implementing JWT-based stateless authentication with a custom Spring Security filter that validates tokens on every protected request.
- Built a file upload endpoint supporting PDF and DOCX formats, integrating Apache PDFBox and Apache POI for server-side text extraction prior to AI analysis.
- Integrated Google Gemini API (gemini-2.5-flash) via Spring RestClient to process extracted resume text and return AI-generated ATS scores with missing skills analysis.
- Implemented BCrypt password hashing, email enumeration prevention via generic error responses, and a global @ControllerAdvice exception handler returning consistent JSON error responses with HTTP status codes.
- Containerized the full stack using Docker and Docker Compose with a multi-stage Dockerfile, health checks, and runtime environment variable injection — entire application runs with a single command.

Customer Relationship Management (CRM) System

Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, REST APIs, JWT

- Secured the platform against unauthorized access, as measured by JWT-protected endpoints across all modules, by implementing Spring Security with token-based authentication.
- Enabled reliable CRUD operations across four core modules, as measured by field-level validation on every Lead, Contact, Deal, and Task entity, by designing REST APIs in Spring Boot with Hibernate/JPA persistence.
- Supported accurate sales-pipeline and task tracking, as measured by correctly structured relational data across customer, deal, and user records, by designing and managing the MySQL database schema.

Soybean Leaf Disease Detection System

Python, TensorFlow, Keras, CNN, Deep Learning

- Trained a CNN to classify soybean leaf images as healthy or diseased using data augmentation and hyperparameter tuning, then extended the work into a YOLOv8-based detection and severity-grading model (see Publications).

PUBLICATIONS

Soybean Leaf Disease Detection with Severity Grading using YOLOv8 CNN

IEEE International Conference on Communication Networks and Computing (CNC-2025) — Accepted December 2025. Co-author; image preprocessing, annotation, and model training using Python, PyTorch, and OpenCV.

EDUCATION

G.H. Raisoni College of Engineering and Management, Nagpur

2022 – 2026

Bachelor of Technology in Computer Science and Engineering — CGPA: 8.26 / 10.0

CERTIFICATIONS

Spring Boot Course — ScholarHat (Jun 2026) | Java OOP (Udemy) | Accenture Developer Job Simulation (Forge)

Extracurricular: Competitive Rubik's Cube solver, sub-30s average.
